THE FESTIVAL, REWIRED.

WWIMF is a conceptual global music festival where music, visual art, and emerging technology converge through active participation.

Traditional festivals often position the audience as spectators. WWIMF proposes a different model: environments, stages, and tools that respond to presence, gesture, and movement - turning every attendee into a contributor.

WHAT IF THE CROWD COULD SHAPE THE SHOW?

The project began with a simple tension: live music is communal, but the experience is usually one-directional. WWIMF explores how identity, environment, and technology can make participation visible and meaningful.

THE ANSWER

MAKE THE AUDIENCE THE INSTRUMENT.

Smart wearables trigger effects. Interactive stages react to movement. Immersive tunnels turn navigation into performance. Every touchpoint is designed to show the audience that their presence changes the world around them.

IDEATE FAST. EDIT HARD.

AI supported the earliest phase of the project as an ideation tool. It accelerated moodboarding, naming, and environment studies, making it possible to compare more directions before committing to a system.

The generated references were treated as raw material, not final design. Each idea was filtered through a clear design intent, then rebuilt through typography, identity, spatial mockups, and motion.

WORLDS BEFORE WALLS.

STAGES THAT RESPOND.

Biomorphic structures, theatrical light, augmented scenery, and reactive installations extend performance beyond a conventional stage. The architecture becomes part of the instrument.

DESIGN THE RESPONSE, NOT JUST THE OBJECT.

TOUCH. MOVE. TRIGGER.

01 / RESPONSIVE WRISTBAND

02 / GLOW MARK-MAKING TOOL

IDENTITY

SOUND, MADE VISIBLE.

The primary wordmark begins with a music visualizer. Its bars become letterforms, rhythm, pattern, and motion - one structural idea that can carry the identity from a wristband to a stage wall.

THE HAND IS THE INTERFACE.

The hand mark combines a universal gesture of participation with the visualizer bars. Changing the bar heights creates an open-ended family of marks without losing recognition.

LOUD / TECHNICAL / HUMAN

COURIER NEW / INFORMATION

Display type carries the volume. Condensed forms create impact at distance and work like stage architecture on the page.

Monospaced type carries the signal. It organizes labels, captions, specifications, and wayfinding with a technical cadence.

SIX FREQUENCIES.

SIGNAL PINK

#ED1D7E

PULSE CYAN

#6FCCDD

BEAM YELLOW

#FED700

NIGHT PURPLE

#5D53A3

HEAT ORANGE

#F04923

FIELD GREEN

#73BF44

ONE MOTIF. MANY STATES.

The visualizer is not decoration. It is a flexible behavior: a wordmark, a hand, a stage silhouette, a background pattern, or a motion rhythm. Repetition makes the system recognizable; variation keeps it alive.

BUILT TO SCALE.

The same signal holds across gallery walls, screens, print, merchandise, and environmental graphics.

APPLICATIONS

TAKE THE SIGNAL WITH YOU.

A GRID THAT LETS ARTISTS CHANGE THE COLOR.

THREE DAYS. ONE SYSTEM.

THE CAMPAIGN ENTERS THE CITY.

THE BRAND STARTS BEHAVING LIKE SOUND.

MOTION PREVIEW

THE FICTION BECOMES PHYSICAL.

For the 2025 RIT Graphic Design Capstone Show, WWIMF became a complete installation: moving screens, lineup posters, identity panels, environmental graphics, and the printed book gathered into one physical experience.

THANK YOU.

To my dad, my role model and a constant source of inspiration behind my creative work. To my mom, for always being there when I needed it most. To my brothers, for being the smartest, funniest, and most supportive people I could ask for. And to my dog, the best goober in the universe.

Thank you to the people I met at RIT and to the professors who shaped my time there - especially my guidance counselor, Nate. Thank you as well to the friends outside RIT who stayed with me through thick and thin.

College felt endless until suddenly it was over. The lesson I am carrying forward is simple: do the things you love, and do not let anyone stop you.

See ya, space cowboy.
